ABOUT US

Valor Security (Pty) Ltd is a black-owned private company providing tailored robust and reliable security services for residential, industrial, corporate, and government entities. We focus on the provision of robust and reliable security solutions. This we do by anchoring our security solution on robust and innovative technological systems to manage all aspects of our operations, solutions, and services. Our integrated approach to security which enables us to deliver on our commitment includes:

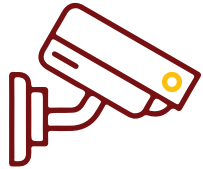

Proposing and implementing mitigation services and strategies to avoid, manage, control, and/or minimize the risks that may affect its client's security and operations.

Recruiting local, qualified, experienced, PSIRA registered personnel and putting them through continuous rigorous training in line with our standards, principles, and client requirements.

Employing robust and innovative technological systems to manage all aspects of our operations and service to our clients

Striving to reach the highest standards of service provision, professionalism, honesty, and ethical behaviour by promoting integrity, transparency, continuous learning, continuous improvement, and good governance.

We endeavor to develop long-term relationships with our clients to provide quality security services tailored to their needs and budget. Furthermore, we believe in understanding and integrating with the communities where we operate so that we understand their culture, crime patterns, local practices, and other practices and patterns that can help us to protect our clients' interests.

Our Vision

Our Vision is to achieve service excellence in what we do.

Our Mission

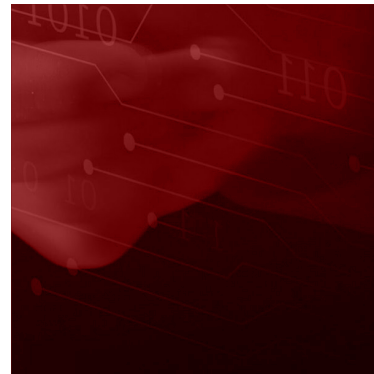

Our Mission is to exceed client expectations by providing proactive yet tailored private security services, based on innovative and robust technological systems, whilst pursuing continuous learning and improvement in what we do.

Our Core Values

We are a value-driven organization that allows the following values to guide and drive our actions.

- ▶ **Valor:** Acting with bravery and courage for the benefit of the Company, its clients, and the public.
- ▶ **Dependable:** Being reliable and dependable to our clients
- ▶ **Professionalism:** Assuming a workplace etiquette of being formal, respectful, and courteous to internal and external stakeholders.
- ▶ **Responsibility:** Assuming responsibility for the business, reputation, and assets of the Company and being willing to take corrective action where necessary to keep the Company on a successful, ethical, and sustainable path.
- ▶ **Accountability:** Accounting for decisions and actions to internal and external stakeholders.
- ▶ **Integrity:** Being honest and having strong moral principles.
- ▶ **Excellence:** Striving to provide quality and outstanding service to internal and external stakeholders

OUR SERVICES

CORE SERVICES Our core focus is on the following services:

REMOTE MONITORING

Using our Artificial Intelligence Technology, we can provide remote CCTV monitoring with Intelligent Video Analytics set up according to client specifications, nature of threat, and/or area monitored. To achieve the highest possible accuracy, we will leverage your system with neural networks trained using videos from your actual site and suited to your specific tasks.

Our CCTV Remote Monitoring Centre is staffed 24 hours a day, 365 days a year, with highly trained security professionals who follow streamlined standard operating procedures to ensure efficient and effective service delivery.

Using the same technology, we can conduct virtual patrols of your premises with similar vigor and thoroughness as physical patrols. These virtual patrols can result in significant costs savings for your organisation without compromising on your safety. Through these analytics we can provide Pre-Emptive Detection as follows:

Activity analytics

// Presence Trigger

Using a multi-point inclusion zone, we can detect the presence of an object in a specific area. As a result, any object that is detected according to the set-up parameters, and is detected in this zone, will generate a trigger in our control room.

// Enter and Exit Area

We can detect objects entry or exit, into or out of a selected area or inclusion zone. The area for detection is selected via a multi-point configuration tool, and we can set it to trigger on objects entering the area, leaving the area, or both.

// Stopping In Area

We can detect if an object has entered and then “stopped” in the inclusion zone for longer than a pre-determined time.

// Line Crossing

We can place an imaginary line in a specific place on the video image, and any objects of a pre-determined size that cross this line going forward or backward will generate a trigger.

// Advanced Line Crossing

We can provide an extension to the basic line crossing by providing an articulated line with as many points as required (e.g double line, curved line)

// Loitering

We can detect if an object or person has been present in a specific area for longer than the predetermined time.

// No Motion

We can detect if there is no motion in a designated area (that should have motion) for a period to indicate a lack of movement in a designated area.

// Speed Detection

We can measure the speed of a tracked object across a pre-determined distance.

// Object Detection

We can monitor and implement user-defined actions based on stationary objects. If an object is detected in a pre-defined area for longer than a specified time, the system will notify our control, who will act accordingly.

// Queue Length Analysis

We can detect if a queue of people or objects is occupied for too long. As such, we can create multiple zones along the queue area and then take action if the zones within the queue are occupied for longer than a specified time.

Behaviour analytics

Using our systems, we can recognize potentially dangerous situations by detecting specific human postures such as.

Skeleton Analysis

We can detect the positions of the body parts to determine different poses. Using the same analytics, we can detect suspicious, anomalous, or deviant behaviour.

ATM Attack/Crime Detection

We can detect suspicious squatting or climbing activity near a cash machine that may indicate an attempt to disable/ remove the security alarm system or place an explosive. As a result, we can alert security personnel to take proactive actions before cash is stolen from ATMs. This ability can be deployed at any site with ATMs: banks, petrol stations, convenience stores, etc.

Armed Robbery Detection

We can recognize the classic armed robbery holdup position, with one-person leveling their arm while another one raises their arms above their head at a fast speed. As such we can alert authorities to threats as they happen without having to put innocent parties at additional risk by raising the alarm themselves. This analytic can be deployed at any site with cash desks: banks, petrol stations, convenience stores, healthcare practices, etc.

Man-Down Detection

We can detect persons lying on the floor or ground for extended periods. We can also use high-resolution thermal cameras that help visualize the location and position of an individual, even in total darkness.

License plate recognition and traffic monitoring analytics

// Auto Intellect

We can help you monitor, control, and manage your vehicle fleets with vehicle analytics that will allow you to detect or recognize vehicle license number plates, vehicle flow monitoring, specific vehicles, speed limit enforcement, etc. automatic red-light enforcement via photo/video capture.

// License Plate Recognition

We can recognize and log car license plates even on moving vehicles and compare them to a database of numbers. We can also log all vehicles that pass through a specified zone, records an image of the car and plate, and note the date, registration time, and direction of each vehicle. Our technology can also be used to identify stolen or hijacked vehicles, automate transport registration, and provide access control at secured locations.

// Monitoring Vehicle Traffic

We can detect road rule violations such as speed limit violation, forbidden stop, forbidden overtake, opposite direction cars driving, and the wrong vehicle on the road.

Face recognition and search

// Face Recognition

We can provide deep learning algorithms- where the system uses powerful machine learning-based techniques to learn, recognize and search faces regardless of the camera angle, lighting, hairstyle, facial expression, glasses, or other variations. Facial recognition is well suited for public spaces, infrastructure sites with critical access control needs, retail outlets, and gambling establishments.

Fire and smoke recognition through neural network video analytics

// Video detection

We can use our system to complement regular fire and smoke sensors. Our systems can also be used as a standalone tool for fire and smoke detection for open-space premises or buildings with a large area and high ceilings.

GUARDING

Our approach to guarding includes deploying as a standard, a **comprehensive guard monitoring system that allows us:**

- ▶ To communicate with all our guards and activate emergency responses, monitor, guide, and manage, in real-time, all our guards.
- ▶ Check our guards' physical location, pace, patrol progress, missed check, and alertness levels.
- ▶ Capture incidents online with photos, voice notes/audio, and GPS location.
- ▶ Conduct real-time visitor check-in/ check-out and provide real-time reports.
- ▶ Alert our clients of maintenance issues and possible threats; and
- ▶ Provide our clients with unaltered daily, weekly, monthly, quarterly activity reports.

Our guards are...

- ▶ Screened upon employment to confirm registration with PSIRA, possession of the South African Id Book, required work experience, work ethics, and criminal record.
- ▶ Trained according to our stringent standards, and according to your site and needs. Furthermore, they undergo regular refresher training to keep them on par with our standards and client requirements.
- ▶ Managed through our comprehensive guard monitoring system that enables us to know all the whereabouts, activities, and movements of our guards.
- ▶ Provided with the correct equipment to be able to carry out their duties diligently.

SUPPLEMENTARY SERVICES

Over and above our core services, we can offer the following supplementary services:

Armed response

Leveraging on all internal and external resources to ensure the shortest possible response time, we will partner and work closely with area-based armed reaction companies, the South African Police, and Community Policing forums to ensure that in the unfortunate event of an incident, the nearest tactical response vehicle, manned by a trained and capable armed reaction officer, is dispatched to you within minutes.

Security installations

We can design, supply, and install security system solutions for efficiency, integrity, longevity, and sustainability. This includes alarms, CCTVs, and biometrics.

Security consulting

The cornerstone of any security decision is intelligence. Our security consulting includes amongst others, security risk assessments which are conducted using our expertise, extensive field experience, and local knowledge. Through these assessments, we can identify possible threats and evaluate the risk based on a typical threat/ risk matrix, thereby allowing us to mitigate the client's exposure. Furthermore, we maintain excellent business relations with leading security service providers, manufacturers, and distributors.

This approach:

- ▶ Provides us with insight and knowledge in the latest crime trends, technological trends, security systems, and weapons.
- ▶ Enables us to be at the forefront with regards to developments in the industry; and
- ▶ Enables our highly experienced and knowledgeable team to provide upon request unbiased, impartial, and independent security advice and recommendations.

Investigations

Our private investigations are handled by an experienced team of investigators with an extensive background in law enforcement.

WE CAN CONDUCT:

BACKGROUND CHECKS

INFORMATION GATHERING

BRAND ENFORCEMENTS

UNDERCOVER INVESTIGATIONS

OUR VALUE PROPOSITION

It's simple really... we are RELIABLE, DEPENDABLE, EFFECTIVE VALOROUS PROMPT, PROFESSIONAL AND TRANSPARENT

RELIABLE, DEPENDABLE, and EFFECTIVE

All our security services are anchored on the latest state-of-the-art technology to enable us to provide our clients with the most reliable, dependable, and effective security solutions.

COST-EFFECTIVE

Our approach of combining physical security with state-of-the-art technology enables us to provide cost-effective security solutions without compromising on your safety

VALOROUS

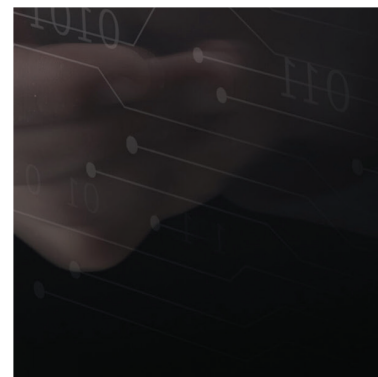

Being courageous, brave, and firm when necessary is in our DNA

Get in touch to learn more about what we can do for you.

OUR APPROACH TO STAFFING

Recruitment and selection

Valor Security is committed to employing and deploying highly trained, capable, quality personnel who demonstrate professional demeanor and conduct in what they do. In this regard, extensive screening and verification processes are used to establish the skills, knowledge, honesty, and integrity of every recruit appointed. This verification process includes criminal fingerprint screening and truth verification tests.

Training

Over and above the PSIRA certificates required as a condition of employment, our security personnel undergoes rigorous ongoing and refresher training in soft skills, technical security skills, fitness, and customer-specific training. Further to this, our reaction officers are put through regular tactical weapons and hand-to-hand combat training. Additionally, all officers are encouraged and rewarded for participating in industry-standard self-study programs whilst every effort is made to accommodate their operational commitments.

The records and progress of each officer are diligently plotted throughout their full employment cycle ensuring a continuous high standard of service, which is recognized and rewarded accordingly.

OUR MANAGEMENT

Valor Security is managed by two of its shareholders who are also the Directors.

Managing Director

The Managing Director **Mr. Maemo Kobe** holds a Grade A PSIRA certificate, operations management certificate as well as a master's in business administration qualification from the University of KwaZulu Natal amongst his other qualifications. He has experience in the security industry at the coal face level and in management, mainly in business management, customer service, and client relations.

Operations Director

The Operations Director **Mr. Mduduzi Ndlovu** has years of experience in the security industry. His career includes starting at the coal face as a guard, supervisor, area manager, and operations manager. Before Valor Security, Mr. Ndlovu has been an operations manager of a well-known security company in Gauteng. Mduduzi holds a Grade A PSIRA certificate.

37

YEARS OF EXPERIENCE

Through our shareholders and Executive Directors who are managing the company, we have a collective of **37 years of experience** in comprehensive security services and management spanning across retail, residential complexes, industrial sites, office parks, construction sites, government offices, and facilities.

VALOR
SECURITY

OUR EXPERIENCE

OUR CORPORATE IDENTITY

Valor Security advances an aesthetically pleasing and quality uniform, that includes corporate to field/combat wear as shown below.

Our standard uniform incorporates all statutory and necessary protective wear and equipment.

In line with our client-centric approach, standard uniforms can be applied or modified to match our clients' requirements. As Valor, we are conscious of the fact that the appearance, bearing, and demeanor of our security personnel should always portray our clients' image and business in a good light.
